- CAT III & IV available

This cotton to tomato rotation where by the Wilcox Eliminator in conjunction with the Rip-Lister provides a three pass effort.

- 1.) Cotton stacks were shreaded.
- 2.) Eliminator removed roots, mulched top 10" and leveled off 38" cotton beds.
- 3.) While building new 66" tomato beds, the Rip-Lister provides sub soiling as well.

By combining listing and subsoiling operations with a Wilcox Rip Lister, growers can realize Conservation Tillage while retaining their subsoiling program. This strategy eliminates all operations typically performed after ripping and prior to listing. By pre-determining the seed row a Rip/Lister allows grower to only invest in sub-soiling the most important part of the field, The area his crop is planted and their roots are grown. In most cases this type listing strategy equates to 35% to 50% sub-soiling cost with full root benefit.
