

While all other bed tools are parked, the Wilcox PERFORMER keeps your equipment investment working throughout the Fall and Spring... The Wilcox ADVANTAGE™ at work for you!

With the optional coulters, a Wilcox PERFORMER may be the only tillage tool needed for reclaiming your beds. The coulters process trash and residue, enabling chisel shanks to pass and then be further broken down and incorporated into the bed by the rotor. Depending on the model, there are as many as 5 locations fore and aft, as well as an infinite side-to-side locations for chisel shanks.

Both PERFORMERS have 5 and 6 row folding model options. The auto lock down wings require only the touch of a hydraulic valve to activate.

The PERFORMER ii is a lighter weight version of the HD PERFORMER, designed to make the switch to 5 or 6 row beds affordable for all growers. Its low maintenance cost and unmatched productivity make it a primary and secondary bed tillage tool that can't be matched!

A One-Two Combination For Complete, Fall and Spring Bed Tillage Strategies: Beds From Start To Finish, Drip Tape, Row Spacing Change, List, Side Dress & Lay By.

Wilcox **ELIMINATOR**

The Wilcox ELIMINATOR, followed by our HD PERFORMER, brings you a superior bed tillage strategy for your cultural and economic needs. The Eliminator prepares the post harvest ground in as few as one to two passes for quick fall or vegetable turn-around bed shaping by the

HD Performer. Come Spring, your PERFORMER lists, mulches, finishes the beds for planting, does pre-plant fertilizing, side dressing and lay by.

No other bed tillage tool is that versatile

Match Your Bed Management Needs to Our WILCOX Bed Tillage Solutions

HD PERFORMER

PERFORMER II

IN FURROW CHISEL w/Crumbler

The **WILCOX PERFORMER** is incredibly versatile, ground driven mulcher, chisel, bed shaper and more. No more troublesome chain boxes, drive lines, gear boxes and related PTO-driven components to deal with from a machine you use once then park for the rest of the year! It is designed to concentrate the maximum soil fracturing and mulching directly throughout the bed area where next year's crop will root, grow and thrive. It gives you traditional fall and spring bed tillage applications available on this one machine.

NO OTHER BED TOOL HAS MORE VERSATILITY THAN THE WILCOX PERFORMER

- Lists
- Shapes,
- Mulches,
- Finishes,
- Lay by
- Fertilizer Injection
- Herbicide Incorporation

TWO PERFORMER MODELS To Match Your Equipment \$\$ To Your Specific Needs

- HD (Heavy Duty) PERFORMER
- PERFORMER II

DRIP TAPE SOLUTION...

Optimize your tomatoes, cotton, vegetable, etc. drip tape beds without damaging your tape!

You can do that with the PERFORMER! Bed tillage chisel fracturing and mulching depth are controlled to keep tape in tact while your PERFORMER completes bed reshaping and finishing tillage operations. Your PERFORMER is now ready for lay by, and side dressing when you need it!

WHILE ALL OTHER BED TOOLS ARE PARKED, THE PERFORMER KEEPS YOUR INVESTMENT WORKING FALL THROUGH SPRING!

The WILCOX IN FURROW CHISEL

concentrates its maximum amount of its fracturing energy in the furrow - where it's needed to solve your compacted furrow problems once and for all!

DESIGNED TO WORK WITH THE PERFORMER FOR THE ENTIRE POST HARVEST RECLAMATION OF BEDS.

Following the heavy duty furrow shanks are furrow crumblers, which fit the contours of the furrows and improve finish prior to the Performer pass by breaking down any remnants of impacted soil after the shanks have passed through it. Furrow crumblers are also the "depth gauge" for the entire tool. A wavy coulter gang shatters, chops and sizes material to aid the Performer's ability to get through trash. Coulters mounted on 4" centers with down pressure maintain with hydraulic control through any bed elevation or chisel depth.

SUPERIOR BED TILLAGE SOLUTIONS FOR FARMERS, Developed By Farmers ...*The Wilcox ADVANTAGE™ at work for you!*

We walk a mile in your shoes...

As a six generation farm family, we face the same challenges you do. We know how tough is to farm around compacted furrows, reclaim drip beds, turn vegetable crop beds around fast enough, etc.

And we know the importance of tillage efficiencies that reduce costs and impact the bottom line of yield, cash flow and profitability. So we design and manufacture tillage tools that gives the results we need as farmers first.

This is what drives our Wilcox Agri-Product tillage tool solutions design and manufacturing business.

We call this the **Wilcox ADVANTAGE™**. It's what separates us from the competition and gives us a one of a kind advantage as often copied leaders in our industry.

We've put that advantage to work in the results you'll gain from the **WILCOX PERFORMER** and **IN FURROW CHISEL**.

The versatility of the Wilcox ground driven HD (Heavy Duty) PERFORMER leads the industry. It can perform Conservation and minimum tillage functions, and is ALSO designed for lay by, herbicide incorporation and fertilizer injection as part of its standard features. In many cases it can be utilized as high speed, durable, low maintenance ground-driven mulcher for multiple bed widths or flat ground. The PERFORMER is capable of primary tillage and finishing as well because of its exclusive design. Chisel shank locations and depth are adjustable. It can list and shapes beds in the same pass by use of the adjustable rear shaper assembly, that can be set from flat to as high as 12 inches. With finishes only found with slow, expensive PTO driven mulchers, it also breaks clods,

seals bed moisture, and in most cases, enhances it. No disc pan is formed, since it does not utilize cutting edges found in disk-type minimum till units. It has proven itself a winner in wet conditions found in many vegetable growing areas by avoiding a build up of slabs that later transform themselves into rock hard clods. Since the PERFORMER produces no lateral thrust, it drafts much straighter than disk type units. Bearings are not subject to side or thrust loads. The aggressive incorporation action of the rotors complete herbicide incorporation and provides a greater degree of mulching and trash break up. Including adjustable shanks and rear bed shaper shoves! round out an incredible list of versitel features.
